

Le Space UG, Lichtenberg 44, 84307 Eggenfelden

Gouaby Kalivogui

Ekaterinburg
Russia

Experience Certificate

Ekaterinburg, 12.07.2020

Gouaby Kalivogui was working at Le Space UG in Eggenfelden / Germany remotely and full-time between November 2019 and June 2020 as a freelancing React-JS developer and Cypress E2E-Test developer in the blockchain and crypto currency project „Doichain“.

He was involved in improving React components for the Doichain crypto wallet „DoiContact“ and developed a wallet creator user interface. In this time he also gained a lot of knowledge in the crypto field for open and decentralized blockchains.

Even though, he was a complete beginner in the software development field, he has proven to understand quickly a broad range of technical concepts in software engineering and blockchain basics such as mining, transactions, block creation, synchronous and asynchronous encryption, signatures, HD address derivation, hashing thought closely by us.

He was starting to work with Windows, later with MacOS and in June with Ubuntu-Linux using Visual Studio and GitHub. He also gained knowledge around the concepts of IPFS and was evaluating textile.io and aviondb.

Gouaby was of especially great value as he was implementing missing functions when raw prototype implementations were handed over to him.

As the project had to be set on hold, we wish Gouaby all the best for his professional career and private life.

Nico Krause
(Managing Director Le Space UG)
